Objective 3: Use Graphing to Identify Inconsistent Systems and Dependent Equations

- When a system has no solution (as in Example 3), it is called an **inconsistent system**.

- When the equations of a system have different graphs (as in Examples 2 and 3), the equations are called **independent equations**. Two equations with the same graph are called **dependent equations**.

- If each equation in one system is equivalent to a corresponding equation in another system, the systems are called **equivalent systems**.

Stocastically Dependent Equations An Int:

    Stochastically Dependent Equations P. R. Fisk,1967   **Fertility Decline and Background Independence** Shuichirou Ike,2015-08-03 In this book the author maintains that fertility declines independently of its background Normally fertility decline is thought to occur as a result of alteration in the socioeconomic background such as the decline of the infant mortality rate urbanization the level of literacy and so on This point of view has been regarded as equivalent to demographic transition However the concept of demographic transition is so superficial na ve and unscientific that it should be applied merely to the ostensible demographic phenomena not to the mechanisms of fertility decline The author regards this way of thinking i e that the occurrence of fertility decline is dependent on socioeconomic background as the background dependence of fertility decline On the contrary there is considerable counterevidence to the background dependence of fertility decline The argument is made that background dependence lacks positive evidence and predictability and consequently is falsifiable That decisive counterevidence is introduced in this book The author revives the diffusion hypothesis of fertility decline at the point of the number of children per couple as the reaction diffusion process in a mathematical equation Fertility decline in Europe in the eighteenth and nineteenth centuries occurred as a reaction diffusion process independent of socioeconomic background In Japan as well fertility the number of children per couple declined independently of background This book provides ample evidences persuasively demonstrating this independence of fertility in Japan The occurrence of marriage is also independent of socioeconomic background Thus the author formalizes the marriage function as an integral equation of marriage probability as a result it demonstrates a better fit with the observed data than does any other marriage function Occurrence of marriage is almost solely dependent on the density of marriages that occur in a given subspace   **High Dimensional Space to Formulate Marriage and Birth Functions** Shuichirou Ike,2022-07-07 With the collapse of Demographic Transition Theory new theories of population must not just be explanations but should be falsifiable theories which can compute the number of occurrences of marriages and births This book reviews computable marriage and birth function using dynamic properties To do that the functions are defined in high dimensional space The reaction diffusion equation of the number of children in a space is applied to these phenomena providing solutions to many problems concerning a decline in fertility The functions are developed as stochastic maps based on the present behaviors of successive behaviors in a geographical space As we assume that there is an inter dependence of human behaviors we use the law of dynamics concerning the function of marriage and birth The exact mathematical definition of interactions in a space naturally implies a causal relation For the function concerning the number of children of parents two geographical dimensional spaces are required The decline in fertility in Belgium due to different languages is explained and the longer fertility period in Brittany is explained by the Laplacian of the diffusion equation Depending on the degree of symbolic control over behaviors we need to add the degree of the dimension of the space For the marriage function we add

age as a biological dimension to the geographical space In this higher dimensional space the mapping from neighboring present marriages to neighboring successive marriages is no less than that of the marriage function These chain reactions caused the baby boom as an exothermal reaction diffusion Birth functions require one to add the marriage age dimension to two geographical and age dimensions so that it is a five dimensional hypersurface It can thus determine birth probabilities of a female who married at a certain age The phenomenon of modern fertility decline may only be the result of these chain reactions These processes are solely dependent upon time space and not on socioeconomic conditions This is the very reason why we are able to predict it mathematically The book provides a new thinking in fertility decline for demographic research Readers need to be aware that the fertility decline experienced throughout the modern era is a spatial pattern formation as a reaction diffusion The author hopes new mathematical applications in human activities are developed through these new models   *Intelligence and Security Informatics* Hsinchun Chen,Christopher C.
