Stokes System In An Infinite Cone:

   The Stokes System in an Infinite Cone Paul Deuring,1994-04-28 Double layer potentials may be used in order to construct strong solutions of the Stokes system on Lipschitz bounded domains under Dirichlet boundary conditions It is kwown that such an approach works in an L framework This book deals with the question whether it is possible to derive a corresponding Lp theory for p 2 To this end a special Lipschitz domain is chosen namely a right circular infinite cone Then the space of all p integrable functions on the surface of this cone is considered Two kinds of double layer potentials are introduced on this space one related to the Stokes system the other one to the Stokes system with resolvent term It is studied how the Fredholm properties of these potentials depend on p on the vertex angle of the cone and in the second case on the resolvent parameter The proof of the corresponding results is worked out in detail so that the book should be accessible not only for scientists working in the field but also for graduate students   **The Stokes Equations** Werner Varnhorn,1994 The present book consists of three parts In the first part a theory of solvability for the stationary Stokes equations in exterior domains is developed We prove existence of strong solutions in Sobolev spaces and use a localisation principle and the divergence equation to deduce further properties of the solution uniqueness asymptotics   Advances in Mathematical Fluid Mechanics Rolf Rannacher,Adélia Sequeira,2010-03-17 The present volume celebrates the 60th birthday of Professor Giovanni Paolo Galdi and honors his remarkable contributions to research in the eld of Mathematical Fluid Mechanics The book contains a collection of 35 peer reviewed papers with authors from 20 countries re ecting the worldwide impact and great inspiration by his work over the years These papers were selected from invited lectures and contributed talks presented at the International Conference on Mathematical Fluid Mechanics held in Estoril Portugal May 21 25 2007 and organized on the oc sion of Professor Galdi s 60th birthday We express our gratitude to all the authors and reviewers for their important contributions Professor Galdi devotes his career to research on the mathematical analysis of the Navier Stokes equations and non Newtonian ow problems with special emphasis on hydrodynamic stability and uid particle interactions impressing the worldwide mathematical communities with his results His numerous contributions have laid down signi cant milestones in these elds with a great in uence on interdis plinary research communities He has advanced the careers of numerous young researchers through his generosity and encouragement some directly through int lectual guidance and others indirectly by pairing them with well chosen senior c laborators A brief review of Professor Galdi s activities and some impressions by colleagues and friends are included here   **Differential Equations, Asymptotic Analysis, and Mathematical Physics** Michael Demuth,Bert-Wolfgang Schulze,1997 This volume contains a collection of original papers associated with the International Conference on Partial Differential Equations held in Potsdam July 29 to August 2 1996 The conference has taken place every year on a high scientific level since 1991 this event is connected with the activities of the Max Planck Research Group for Partial Differential Equations at Potsdam Outstanding researchers and specialists from Armenia Belarus

Belgium Bulgaria Canada China France Germany Great Britain India Israel Italy Japan Poland Romania Russia Spain Sweden Switzerland Ukraine and the USA contribute to this volume The main topics concern recent progress in partial differential equations microlocal analysis pseudo differential operators on manifolds with singularities aspects in differential geometry and index theory operator theory and operator algebras stochastic spectral analysis semigroups Dirichlet forms Schrodinger operators semiclassical analysis and scattering theory   Around the Research of Vladimir Maz'ya II Ari Laptev,2009-12-05 Topics of this volume are close to scientific interests of Professor Maz ya and use directly or indirectly the fundamental influential Maz ya s works penetrating in a sense the theory of PDEs In particular recent advantages in the study of semilinear elliptic equations stationary Navier Stokes equations the Stokes system in convex polyhedra periodic scattering problems problems with perturbed boundary at a conic point singular perturbations arising in elliptic shells and other important problems in mathematical physics are presented   *Fortschritte der Physik* ,1995   **Advances in Differential Equations** ,2001   *Viscous Incompressible Flow for Low Reynolds Numbers* Mirela Kohr,Ioan I. Pop,2004 This book presents the fundamental mathematical theory of and reviews state of the art advances in low Reynolds number viscous incompressible flow The authors devote much of the text to the development of boundary integral methods for slow viscous flow pointing out new and important results   *Numerical Methods and Error Bounds* G. Alefeld,Jürgen Herzberger,1996 This volume contains the invited talks and short communications presented at the IMACS GAMM International Symposium The participants from all over the world presented their results in the field of development and investigation of numerical algorithms under the aspect of constructing proper error bounds for approximated solutions Among the subjects of the talks were problems like systems of linear and nonlinear equations ordinary and partial differential equation solvers data fitting methods computer geometry computer arithmetic interval arithmetic and selected problems in theoretical mechanics   **Maslov Classes, Metaplectic Representation and Lagrangian Quantization** Maurice de Gosson,1997 The Maslov Classes have been playing an essential role in various parts of applied and pure mathematics and physics since the early 70 s Their correct definition is due to V I Arnold and J Leray in the transversal case and to P Dazord and the author in the general case The aim of this book is to give a thorough treatment of the theory of the Maslov classes and of their relationship with the metaplectic group It is among other things shown that these classes can be reconstructed modulo 4 using only the analytic properties of the metaplectic group In the last chapter the author sketches a scheme for geometric quantization by introducing two new concepts that of metaplectic half form and that of Lagrangian catalogue the latter generalizes and simplifies the notion of Lagrangian function introduced by J Leray A Lagrangian catalogue is a collection of metaplectic half forms which are themselves cohomological wave functions whose definition is made possible by using the combinatorial properties of the Maslov classes The transformation of Lagrangian catalogues under the metaplectic group and of Hamiltonian flows is studied and it is shown that one thus recovers very easily the so called quasi classical approximation to

the solutions of Schr dinger equation if one introduces a natural concept that of projection of a Lagrangian catalogue An application to geometric phase shifts including Berry s phase is given **Spectral Theory of Indefinite Krein-Feller Differential Operators** Andreas Fleige,1996-08-15 The vibration of a string with a nondecreasing mass distribution function m leads to a generalized differential equation of second order introduced by Krein and by Feller The author allows also nonmonotonic functions m and hence gets into the theory of indefinite inner product spaces Here at the first time a systematic presentation of the generalized differential expression and of J selfadjoint operator realizations is given Developing a spectral theory for such Krein Feller operators the author derives the most general known criteria for the regularity of the critical point infinity Then by specialization expansion theorems for wide classes of indefinite second order differential and difference operators are obtained **Systems and Networks, Systems and Networks: Mathematical Theory and Applications** Uwe Helmke,Reinhard Mennicken,Josef Saurer,1994-09-06 The Symposium of the Mathematical Theory of Networks and Systems MTNS is an international event which is held biannually since 1973 MTNS 93 was the tenth meeting and the first one organized in Germany It took place in Regensburg in August 1993 The symposia focus attention on the mathematical foundations of systems control and circuit theory signal processing and their applications areas which are of vital interest for mathematicians and engineers The successful interaction between advanced mathematical methods and engineering problems is continuing to create an impressive body of theories and new results The first volume contains the key invited lectures presented at MTNS 93 The contributions are written by outstanding researchers working in the areas of the symposium They describe new developments in the theory and its applications presenting major new advances in linear and nonlinear control operator theoretic methods as well as modelling issues *Parameter-Free Iterative Linear Solvers* Rüdiger Weiss,1996-08-15 This book presents a unifying theoretical framework for iterative solvers for linear systems The focus is on parameter free methods i e methods that can be applied without a priori knowledge of inner properties of the systems Despite the generality of the approach convergence estimates and geometrical properties can be derived State of the art solvers are surveyed and classified Many new relations between these methods are furnished leading to a deeper insight Existing gaps in the theory are pointed out and some visions for the design of more efficient and robust solvers are given A valuation of established methods based on the theoretical results and on numerical tests is given Recipes for the application of particular techniques are derived The criteria are efficiency robustness and the possibility of parallelization This book has a triple aim to simplify the analysis by a unified theory to survey and valuate state of the art solvers and to give an introduction to iterative solvers for non experts in the field **The Degenerate Oblique Derivative Problem for Elliptic and Parabolic Equations (Paper Only) (See 3527401121)** Petar R. Popivanov,Dian K. Palagachev,1997-04-17 **Global Hypoellipticity and Spectral Theory** Paolo Boggiatto,Ernesto Buzano,Luigi Rodino,1996 This book concerns the spectral theory of global hypoelliptic pseudodifferential operators in Rn and the asymptotic estimate of the eigenvalue distribution

function N l of a hypoelliptic differential operator with polynomial coefficients in Rn In the first part of the book the pseudodifferential calculus with respect to a multi quasi elliptic weight is introduced In particular the self adjoint property is related to the Weyl symbol while positivity continuity and compactness in L2 Rn are investigated by the Anti Wick symbol In the second part after an introduction to the spectral theory for global hypoelliptic essentially selfadjoint operators the asymptotic expansion of N l is computed for a multi quasi elliptic differential operator with polynomial coefficients In particular this is achieved by computing the asymptotic expansion of the Weyl term V l In this way some original results are obtained both with respect to a refinement of the asymptotic formula and the class of symbols considered **Transient Tunnel Effect and Sommerfeld Problem** Felix Ali Mehmeti,1996-10-24 The author investigates the n time decay of solutions of the Klein Gordon equation in one space dimension with a semi infinite potential step and derives a limiting absorption principle for the wave equation in two space dimensions with zero Dirichlet conditions imposed on a half axis These are model cases for transient waves in media with semi infinite geometry involving interfaces and cracktips
