Monitoring and Early Warning Technologies on Karst Lands Xiaozhen Jiang,Mingtang Lei,Wanfang Zhou,Fubiao Zhou,Xiao Ma,Jianling Dai,Zongyuan Pan,2024-06-19 This book compiles

a broad range of monitoring and early warning technologies focused on high resolution in situ water quality parameters at springs and monitoring wells. The surface collapses often cause severe damage to infrastructures properties and loss of lives whereas contaminated groundwater poses risks to human health and the environment. Collapses are critical in karst systems sparsely covering a seventh of Earth's land surface. Karsts are also very relevant for drinking water yet karst represents a fourth of global drinking water. Mitigating collapses and contaminated groundwater in karst aquifers can be complicated and costly. These parameters detect hydrodynamics, internal soil erosion and ground deformation changes as karst collapse and pollution proxies. This book represents the most comprehensive overview of decades of research on karst collapse and groundwater contamination. This book is of interest to researchers and policymakers.
