It is a comprehensive introduction to research methods and data analysis. The book assumes no previous knowledge of research methods or psychology and provides an accessible, highly entertaining and jargon-free way into this frequently difficult topic area. More than any other book, this text will help reduce student angst. The book provides coverage of both quantitative and qualitative methods. This includes detail of the statistical analysis of data by hand and using SPSS for Windows version 11.0 and the analysis of qualitative data with all the major approaches in use today.

Data Analysis in Community and Landscape Ecology R. H. Jongman, C. J. F. Ter Braak, O. F. R. van Tongeren, 1995-03-02. Ecological data has several special properties: the presence or absence of species on a semi-quantitative abundance scale, non-linear relationships between species and environmental factors, and high inter-correlations among species and among environmental variables. The analysis of such data is important to the interpretation of relationships within plant and animal communities and with their environments. In this corrected version of *Data Analysis in Community and Landscape Ecology* without using complex mathematics, the contributors demonstrate the methods that have proven most useful with examples, exercises, and case studies. Chapters explain in an elementary way powerful data analysis techniques such as logic regression, canonical correspondence analysis, and kriging.
