Retroreflective Requirements for Traffic Signs - a STOP Case Study. Final Report Juan M. Morales,1987 This study determined the performance of STOP signs based on their retroreflective properties Thirty five 30 inch STOP signs including engineering grade and high intensity were measured in the laboratory to determine their retroreflective properties A subset of ten signs was taken to the field to determine how far they could be recognized by paid subjects Mathematical relationships between the various retroreflective properties and recognition distance were developed The overall specific intensity per unit area SIA was found to be a good measure for estimating the recognition distance of STOP signs      Guidelines on the Use and Operation of Changeable Message Signs Conrad L.
