Testing Problems With Linear Or Angular Inequality Constraints:

Testing Problems with Linear or Angular Inequality Constraints Johan C. Akkerboom, 2012-12-06 Represents a self contained account of a new promising and generally applicable approach to a large class of one sided testing problems where the alternative is restricted by at least two linear inequalities It highlights the geometrical structure of these problems It gives guidance in the construction of a so called Circular Likelihood Ratio CLR test which is obtained if the linear inequalities or polyhedral cone are replaced by one suitable angular inequality or circular cone Such a test will often constitute a nice and easy to use compromise between the LR test and a suitable linear test against the original alternative The book treats both theory and practice of CLR tests For cases with up to 13 linear inequalities it evaluates the power of CLR tests derives the most stringent CLR test and provides tables of critical values It is of interest both to the specialist in order restricted inference and to the statistical consultant in need of simple and powerful one sided tests Many examples are worked out for ANOVA goodness of fit and contingency table problems Case studies are devoted to Mokken s one dimensional scaling model one sided treatment comparison in a two period crossover trial and some real data ANOVA layouts biology and educational psychology

Constrained Statistical Inference Mervyn J. Silvapulle, Pranab Kumar Sen, 2011-09-15 An up to date approach to understanding statistical inference Statistical inference is finding useful applications in numerous fields from sociology and econometrics to biostatistics This volume enables professionals in these and related fields to master the concepts of statistical inference under inequality constraints and to apply the theory to problems in a variety of areas *Constrained Statistical Inference Order Inequality and Shape Constraints* provides a unified and up to date treatment of the methodology It clearly illustrates concepts with practical examples from a variety of fields focusing on sociology econometrics and biostatistics The authors also discuss a broad range of other inequality constrained inference problems that do not fit well in the contemplated unified framework providing a meaningful way for readers to comprehend methodological resolutions Chapter coverage includes Population means and isotonic regression Inequality constrained tests on normal means Tests in general parametric models Likelihood and alternatives Analysis of categorical data Inference on monotone density function unimodal density function shape constraints and DMRL functions Bayesian perspectives including Stein s Paradox shrinkage estimation and decision theory

Discretization and MCMC Convergence Assessment Christian P. Robert, 2012-12-06 The exponential increase in the use of MCMC methods and the corresponding applications in domains of even higher complexity have caused a growing concern about the available convergence assessment methods and the realization that some of these methods were not reliable enough for all purpose analyses Some researchers have mainly focussed on the convergence to stationarity and the estimation of rates of convergence in relation with the eigenvalues of the transition kernel This monograph adopts a different perspective by developing supposedly practical devices to assess the mixing behaviour of the

chain under study and more particularly it proposes methods based on finite state space Markov chains which are obtained either through a discretization of the original Markov chain or through a duality principle relating a continuous state space Markov chain to another finite Markov chain as in missing data or latent variable models The motivation for the choice of finite state spaces is that although the resulting control is cruder in the sense that it can often monitor convergence for the discretized version alone it is also much stricter than alternative methods since the tools available for finite Markov chains are universal and the resulting transition matrix can be estimated more accurately Moreover while some setups impose a fixed finite state space other allow for possible refinements in the discretization level and for consecutive improvements in the convergence monitoring

Statistical Hypothesis Testing: Theory And Methods Ning-zhong Shi, Jian Tao, 2008-09-29 This book presents up to date theory and methods of statistical hypothesis testing based on measure theory The so called statistical space is a measurable space adding a family of probability measures Most topics in the book will be developed based on this term The book includes some typical data sets such as the relation between race and the death penalty verdict the behavior of food intake of two kinds of Zucker rats and the per capita income and expenditure in China during the 1978 2002 period Emphasis is given to the process of finding appropriate statistical techniques and methods of evaluating these techniques
