Specification And Verification Of Concurrent Systems Workshops In Computing:

Specification and Verification of Concurrent Systems Charles Rattray, 2013-11-11 This volume contains papers presented at the BCS FACS Workshop on Specification and Verification of Concurrent Systems held on 6-8 July 1988 at the University of Stirling, Scotland. Specification and verification techniques are playing an increasingly important role in the design and production of practical concurrent systems. The wider application of these techniques serves to identify difficult problems that require new approaches to their solution and further developments in specification and verification. The Workshop aimed to capture this interplay by providing a forum for the exchange of the experience of academic and industrial experts in the field. Presentations included surveys, original research, practical experience with methods, tools and environments in the following or related areas: Object oriented process data and logic based models and specification methods for concurrent systems; Verification of concurrent systems; Tools and environments for the analysis of concurrent systems; Applications of specification languages to practical concurrent system design and development. We should like to thank the invited speakers and all the authors of the papers whose work contributed to making the Workshop such a success. We were particularly pleased with the international response to our call for papers. Invited Speakers: Pierre America, Philips Research Laboratories, University of Warwick; Professor M. Joseph David, Freestone British Telecom; Organising Committee: Charles Rattray, Dr. Muffy Thomas, Dr. Simon Jones, Dr. John Cooke, Professor Ken Turner, Derek Coleman, Maurice Naftalin, Dr. Peter Scharbach. vi Preface. We would like to acknowledge the financial contribution made by SD Systems Designers, Camberley, Surrey.

Concurrent Systems Michael Gerard Hinchey, Stephen A. Jarvis, 1995. Techniques based on formal methods such as the language of CSP (Communicating Sequential Processes) have proven to be the most successful means of conquering complexity in the specification of concurrent embedded real time and distributed systems. *Design, Specification and Verification of Interactive Systems '96* Francois Bodart, 1996-10-07. Making systems easier to use implies an ever increasing complexity in managing communication between users and applications. Indeed, an increasing part of the application code is devoted to the user interface portion. In order to manage this complexity, it is important to have tools, notations and methodologies which support the designer's work during the refinement process from specification to implementation. Selected revised papers from the Eurographics workshop in Namur review the state of the art in this area, comparing the different existing approaches to this field in order to identify the principle requirements and the most suitable notations and indicate the meaningful results which can be obtained from them. *International Workshop on Software Specification and Design [proceedings]*, 1993. Algebraic Methodology and Software Technology (AMAST'91) M. Nivat, 1994. The goal of the AMAST conferences is to foster algebraic methodology as a foundation for software technology and to show that this can lead to practical mathematical alternatives to the ad hoc approaches commonly used in software engineering and development. The first two AMAST conferences held in May 1989 and May 1991 at the University of Iowa were well received and

encouraged the regular organization of further AMAST conferences on a biennial schedule The third Conference on Algebraic Methodology and Software Technology was held in the campus of the University of Twente The Netherlands during the first week of Summer 1993 Nearly a hundred people from all continents attended the conference The largest interest received by the AMAST conference among the professionals extended to include the administration organizations as well AMAST 93 was opened by the Rector of the University of Twente followed by the Local Chairman Their opening addresses open this proceedings too The proceedings contains 8 invited papers and 32 selected communications The selection was very strict for 121 submissions were received *Design, Specification and Verification of Interactive Systems '95* Philippe

Palanque,1995-09-14 Twenty one contributions cover the different aspects of interactive systems from formal user modelling to formal techniques for prototyping and describe the state of the art on these topics also giving new directions for future research The book is an obligatory piece of literature for all scientists working in the formal aspects of the interactive systems field but it is also valuable for the practitioner involved in the design of reliable interactive systems ACM Transactions on Software Engineering and Methodology ,1999 **Computer-aided Verification** ,1995 **ZUM ... the Z Formal Specification Notation** ,1998 Bibliographic Guide to Computer Science ,1991 **Proceedings of the Sixth International Workshop on Software Specification and Design, October 25-26, 1991, Como, Italy** ,1991
