AND NATURAL LAW (The Eighth Edition)** WANG GENXI, 2025-12-23

The triple number is essentially a digital model based on the three bit binary and the operation types of the factors are different. The triple number is not only a simple binary model but also has the reasoning function of formal logic. In theory it is feasible to use this digital model to study some scientific problems that have isomorphic properties in formal logic. Some famous mathematical conjectures are discussed with triple number such as ABC Conjecture Goldbach Conjecture Twin Prime Conjecture Catalan Conjecture  $3n+1$  Conjecture Fermat's Theorem Euler Conjecture Poincaré Conjecture Riemann Conjecture Quantum Properties of Mathematics and Russell Paradox Perfect Cube BSD Conjecture Hodge Conjecture Hualin Conjecture Diophantine Equation NP Complete Problem Ringer Conjecture and Four Color Theorem. The relationship between triple number and probability fuzzy mathematics limit trigonometric function binomial theorem Taylor formula high order differential definite integral multiple integral Dirichlet function order and tensor of magic group is discussed. By triple number quaternions octal numbers p numbers and vectors are also discussed. The triplet product digital chain can characterize infinity and indefinitely small. Triple number is used to find the mathematical and physical constants in the universe. The coding rules of 64 genetic codes are discussed and the concept of DNA geometry is proposed by triple number. The book supposes that the great unified force of the four forces in the universe is Planck force which is transmitted by Planck force. By the digital model of Planck force transferring velocity the book deals with the universe's singularity space time space time quantum temperature information entropy black hole mass energy dark matter dark energy consciousness anti speed anti space time virtual space time virtual mass virtual energy negative mass negative energy negative temperature antimatter and elements. The author predicts that there should be 262 elements in the complete periodic table and theoretically the atomic weight of each element can be obtained.
