The Construction of New Mathematical Knowledge in Classroom Interaction Heinz Steinbring, 2005-03-22 Mathematics is generally considered as the only science where knowledge is uniform, universal and free from contradictions. Mathematics is a social product, a net of norms as Wittgenstein writes. In contrast to other institutions (traffic rules, legal systems, or table manners) which are often internally contradictory and are hardly ever unrestrictedly accepted, mathematics is distinguished by coherence and consensus. Although mathematics is presumably the discipline which is the most differentiated internally, the corpus of mathematical knowledge constitutes a coherent whole. The consistency of mathematics cannot be proved yet so far no contradictions were found that would question the uniformity of mathematics. Heintz 2000 p 11. The coherence of mathematical knowledge is closely related to the kind of professional communication that research mathematicians hold about mathematical knowledge. In an extensive study, Bettina Heintz Heintz 2000 proposed that the historical development of formal mathematical proof was in fact a means of establishing a communicable code of conduct which helped mathematicians make themselves understood in relation to the truth of mathematical statements in a coordinated and unequivocal way.
