Bladder cancer is one of the most exciting urological cancers. It exists in two forms non muscle invasive (NMI) and muscle invasive (MI) disease. The difference in the clinical picture has been the focus of significant research in defining the molecular characteristics of urothelial cancer (UC) of the bladder. This book provides an overview of the most hotly debated areas in bladder cancer. Authors have focused on the emerging role of markers for NMI UC and various ways of improving the efficacy

of current chemotherapy in the first section The second section has focused on the surgical aspects of MI UC Two major areas of debate the role of pelvic lymph node dissection and genital sparing surgery are discussed in this section

Zingg,D.M.A. Wallace,2012-12-06

Cancer of the bladder has a bad reputation the combination of urinary problems and malignancy gives just cause for continuing concern Not only is this common cancer a burden to the patient but because of the need for regular follow up it creates a large workload on the urological services It might be imagined that the bladder would give early warning signals of disease and indeed it may do so yet it can also be hesitant to reveal its severity Thus there are many problems that create challenges in the diagnosis and management Prevention is still the first goal of an oncologist with early detection of early disease being the next best option Early bladder cancer is amenable to several therapeutic approaches but we have still to determine the best approach The management of more advanced invasive bladder cancer all too often leads to disappointment and we remain uncertain as to the optimum approach surgery radiotherapy chemotherapy or some combination of these Although none of these problems may be fully answered either now or in the near future many people are working towards their solution and the rate of progress needs to be documented from time to time This volume aims to set the standard for the present state of our knowledge on bladder cancer The editors Professor Ernst Zingg and Mr Michael Wallace have gathered together the best opinions on a wide range of topics relating to bladder cancer Textbook of Bladder Cancer Seth P. Merseburger,Stefan H. distinct molecular signatures appear to be involved in the development of low grade versus high grade bladder tumors. Currently being monitored by an invasive endoscopic procedure cystectomy with urine cytology as an adjunct bladder cancer is at the forefront of developing cancer biomarkers for non invasive detection. Due to the differences in the invasive and metastatic potential of bladder tumors treatment options differ depending upon tumor grade and stage. New advances are being made in treatment options to improve the outcome and quality of life for patients with bladder cancer. Similarly new molecular nomograms are being discovered to predict treatment outcome so that individualized treatment options can be offered to patients.
