Assessment and Care of the Fetus Robert D. Eden, Frank H. Boehm, Mary Haire,1990 *Alcohol and Health* U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES,1987 Moral Judgment and Reasoning in Children and Adolescents with Prenatal Alcohol Exposure Amy Michele Goodman Schonfeld,2002 Prenatal exposure to alcohol is associated with a variety of cognitive behavioral and social deficits including delinquent behaviors Individuals exposed to alcohol prenatally both with and without fetal alcohol syndrome FAS have similar deficits in these functional areas It is well documented that delinquent populations and those with intellectual and behavioral deficits exhibit impaired moral judgment and reasoning but this area remains unexplored in alcohol exposed individuals For these reasons children and adolescents with ALC and without CON prenatal alcohol exposure were evaluated on measures of moral judgment and reasoning and delinquency Results revealed that while those in the ALC group performed at a lower level of moral maturity than the CON group the difference was not significant In addition Verbal IQ primarily accounted for this difference However there was suggestion that a deficit on the value judgment having to do with relationships with others i e Affiliation is specific to prenatal alcohol exposure As predicted delinquency was higher for those in the ALC group but contrary to expectations moral maturity did not predict delinquent behavior In the CON group only as the age of the subjects increased more delinquent behaviors were endorsed For the ALC group socially desirable responding predicted delinquent behavior suggesting under endorsement of such behavior A measure of inhibition did not predict delinquency or moral maturity beyond control measures Finally significantly more children and adolescents with heavy prenatal alcohol exposure but without FAS met criteria for Conduct Disorder CD The results of this study suggest that those with prenatal alcohol exposure are at a lower developmental level with respect to their moral reasoning about their affiliation with others In addition alcohol exposed individuals specifically those without a diagnosis of FAS are at higher risk for delinquency particularly Conduct Disorder The implications of this study are twofold First the findings indicate that children and adolescents with prenatal alcohol exposure will benefit from social skills training in light of their continued deficits in interpersonal relations Second interventions aimed at their delinquent tendencies is warranted however targeting moral judgment for this purpose in such an intervention may not yield additional benefit **Developmental Disabilities Bulletin** ,2003 *Understanding Nutrition* Eleanor Noss Whitney,Eva

May Nunnelley Hamilton, Sharon Rady Rolfes, 1990 Abstract This college textbook presents the core information of an introductory nutrition course Based on the principles of chemistry and molecular biology chapters 1-11 describe the nutrients and how the body handles them The remaining seven chapters illustrate how nutrition influences people's lives Several of these chapters reflect the trend toward promoting optimal health through optimal nutrition Topics include recommended nutrient intakes and diet planning guides digestion absorption and transport metabolism vitamins and minerals energy balance and weight control life cycle nutrition pregnancy infancy childhood adolescence and adulthood nutrition and disease prevention consumer concerns and domestic and world hunger *Child Abuse and Neglect* ,2006 Journal of Perinatal Medicine ,1998
