*Formal Methods for Embedded Distributed Systems* Fabrice Kordon,Michel Lemoine,2004 The development of any Software Industrial Intensive System e g critical embedded software requires both different notations and a strong development process Different notations are mandatory because different aspects of the Software System have to be tackled A strong development process is mandatory as well because without a strong organization we cannot warrantee the system will meet its requirements Unfortunately much more is needed Formal Methods for Embedded Distributed Systems is dedicated to the presentation of some techniques to be used in the context of distributed and or embedded systems Since formal techniques rely on models i e different descriptions of the system to be designed the presented techniques are located in the first part of software development Formal Methods for Embedded Distributed Systems makes many connections between traditional development approaches and the latest developments in formal techniques that are known as the best solution to significantly increase the reliability of such systems The target audience is mainly composed of professionals engineers researchers and teachers and students graduated and postgraduated who want to have a clear understanding of how to manage the inherent complexity of critical and or distributed systems
