## **Solar Manifesto:**

**A Solar Manifesto** Hermann Scheer, 2021-12-16 In the decade since the Earth Summit in Rio de Janeiro the response of the world's governments and authorities to the threats to the global environment has been to enforce the reduction of energy consumption and harmful emissions solutions primarily based around conventional energy resources and conventional thinking. The question is though whether this strategy is radical enough to address the key challenges facing the environment and whether it can be effective in avoiding catastrophe on a global scale. For Herman Scheer the answer is a definite no. In this fully updated edition of *A Solar Manifesto* he once more attacks the lack of political will to find answers outside a conventional frame of reference. Climate change, pollution, deforestation, destruction of the ozone layer, poverty and the population explosion are all problems created or exacerbated by the use of conventional energy. Seven years after the first edition of this book answers are now more urgently required than ever as current policies serve merely to alleviate the escalating symptoms rather than attempting a cure for what could become a terminal affliction. Herman Scheer shows that this crisis may yet be reversed but it can only be made to happen through a fundamental change in political and economic strategies paving the way towards a global solar energy economy sustained by new social principles. *A Solar Manifesto* champions the replacement of fossil and nuclear fuels with solar energy as a real solution to the threat to the environment and associated social consequences. Scheer constructs a radical yet innovative political and economic model and argues the case with passion and conviction for the global solar economy as the route to a sustainable environment. Thought provoking and profoundly challenging this book will be an inspiration to anyone concerned with energy and the global environment.

**The Solar Economy** Hermann Scheer, 2013-06-17 The global economy and our way of life are based on the exploitation of fossil fuels which not only threaten massive environmental and social disruption through global warming but at present rates of consumption will run out within decades causing huge industrial dislocation and economic collapse. Even before then the conflicts it causes in the Middle East and elsewhere will be frighteningly exacerbated. The alternative exists: renewable energy from renewable sources above all solar. Substituting renewable for fossil resources will take a new industrial revolution to avert the worst of the damage and establish a new international order. It can be done and it can be done in time. *The Solar Economy* by one of the world's most effective analysts and advocates lays out the blueprints showing how the political, economic and technological challenges can be met using indigenous renewable and universally available resources and the enormous opportunities and benefits that will flow from doing so.

**Energy and Power** Stephen G. Gross, 2023 In *Energy and Power* Stephen G. Gross offers the first comprehensive history of German energy and climate policy from World War II to the present. He shows how debates over energy profoundly shaped the course of German history and influenced the landmark developments that define modern Europe. Moving beyond conventional economic theory this book gives a novel explanation for why energy transitions happen. Further it provides a powerful lens to move beyond conventional debates on

Germany's East West divide or its postwar engagement with the Holocaust to explore how this nation has shaped the contemporary world in other important ways [Green Tyranny](#) Rupert Darwall, 2017-10-03 Climate change was political long before Al Gore first started talking about it. In the 1970s the Swedish Social Democrats used global warming to get political support for building a string of nuclear power stations. It was the second phase of their war on coal which began with the acid rain scare and the first big UN environment conference in Stockholm in 1969. Acid rain swept all before it. America held out for as long as Ronald Reagan was in the White House but capitulated under his successor. Like global warming acid rain had the vocal support of the scientific establishment but the consensus science collapsed just as Congress was passing acid rain cap and trade legislation. Rather than tell legislators and the nation the truth the EPA attacked a lead scientist and suppressed the federal report showing that the scientific case for action on curbing power station emissions was baseless. Ostensibly neutral in the Cold War Sweden had a secret military alliance with Washington. A hero of the international Left Sweden's Olof Palme used environmentalism to maintain a precarious balance between East and West. Thus Stockholm was the conduit for the KGB inspired nuclear winter scare. The bait was taken by Carl Sagan and leading scientists who tried to undermine Ronald Reagan's nuclear strategy and acted as propaganda tools to end the Cold War on Moscow's terms. Nuclear energy was to have been the solution to global warming. It didn't turn out that way most of all thanks to Germany. Instead America and the world are following Germany's lead in embracing wind and solar. German obsession with renewable energy originates deep within its culture. Few know today that the Nazis were the first political party to champion wind power. Hitler calling wind the energy of the future. Post 1945 West Germany appeared normal but anti nuclear protests in the 1970s led to the fusion of extreme Left and Right and the birth of the Greens in 1980. Their rise changed Germany then Europe and now the world. Radical environmentalism became mainstream. It demands more than the rejection of the abundant hydrocarbon energy that fuels American greatness. It requires the suppression of dissent.
