Methods Of Experimental Physics: Vol 21: Solid State: Nuclear Methods J.N. Mundy, *Hydrogen Storage Materials* Darren P. Broom, 2011-02-28 The problem of storing hydrogen safely and effectively is one of the major technological barriers currently preventing the widespread adoption of hydrogen as an energy carrier and the subsequent transition to a so called hydrogen economy Practical issues with the storage of hydrogen in both gas and liquid form appear to make reversible solid state hydrogen storage the most promising potential solution *Hydrogen Storage Materials* addresses the characterisation of the hydrogen storage properties of the materials that are currently being considered for this purpose The background to the topic is introduced along with the various types of materials that are currently under investigation including nanostructured interstitial and complex hydrides and porous materials such as metal organic frameworks and microporous organic polymers The main features of *Hydrogen Storage Materials* include an overview of the different types of hydrogen storage materials and the properties that are of interest for their practical use descriptions of the gas sorption measurement methods used to determine these properties and the complementary techniques that can be used to help corroborate hydrogen uptake data and extensive coverage of the practical considerations for accurate hydrogen sorption measurement that drive both instrument design and the development of experimental methodology *Hydrogen Storage Materials* provides an up to date overview of the topic for experienced researchers while including enough introductory material to serve as a useful practical introduction for newcomers to the field *Solid State*, 1983-12-01 *Solid State* **Solid-state Physics Source Book** Sybil P. Parker, 1988 International Tables for Crystallography, Volume B U. Shmueli, 2008-08-25 *International Tables for Crystallography* is the definitive resource and reference work for crystallography and structural science Volume B presents accounts of the numerous aspects of reciprocal space in crystallographic research This volume is a vital addition to the library of scientists engaged in crystal structure determination crystallographic computing crystal physics and other fields of crystallographic research Graduate students specializing in crystallography will find much material suitable for self study and a rich source of references to the relevant literature New to this edition A new chapter on modern extensions of the Ewald method for Coulomb interactions in crystals Three new sections on electron diffraction and electron microscopy in structure determination describing point group and space group determination by convergent beam electron diffraction three dimensional reconstruction and single particle reconstruction Substantial revisions to the chapters on space group representations in reciprocal space direct methods Patterson and molecular replacement techniques and disorder diffuse scattering More information on the series can be found at <http://it.iucr.org> **Methods of Experimental Physics**, 1983 Diffusion in Solids Amulya L. Laskar, G. E. Murch, 1984 **Subject Guide to Books in Print**, 1993 **Scientific and Technical Books and Serials in Print**, 1989 **Fundamental Aspects of Inert Gases in Solids** S.E. Donnelly, J.H. Evans, 2013-12-20 The NATO Advanced Research Workshop on Fundamental Aspects of Inert Gases in Solids held at Bonas

France from 16-22 September 1990 was the fifth in a series of meetings that have been held in this topic area since 1979. The Consultants Meeting in that year at Harwell on Rare Gas Behaviour in Metals and Ionic Solids was followed in 1982 by the Jülich International Symposium on Fundamental Aspects of Helium in Metals. Two smaller meetings have followed: a CECAM organised workshop on Helium Bubbles in Metals was held at Orsay, France, in 1986, while in February 1989 a Topical Symposium on Noble Gases in Metals was held in Las Vegas as part of the large TMS AIME Spring Meeting. As is well known, the dominating feature of inert gas atoms in most solids is their high heat of solution, leading in most situations to an essentially zero solubility and gas atom precipitation. In organising the workshop, one particular aim was to target the researchers in the field of inert gas solid interactions from three different areas: namely metals, tritides and nuclear fuels, in order to encourage and foster the cross-fertilisation of approaches and ideas. In these three material classes, the behaviour of inert gases in metals has probably been most studied, partly from technological considerations, the effects of helium production via nuclear reactions during neutron irradiation are of importance, particularly in a fusion reactor environment, and partly from a more fundamental viewpoint. **Journal de Physique**, 1991 **Acta Physica Sinica**, 1994 *Advances in Materials Characterization* G. International Tables for Crystallography, Volume B International Union of Crystallography, 1993-06-30. International Tables for Crystallography are no longer available for purchase from Springer. For further information, please contact Wiley Inc. The general purpose of Volume B of the International Tables for Crystallography is to present the user/reader with competent and useful accounts of the numerous aspects of reciprocal space in crystallographic research. After an introductory chapter, Part 1 presents the reader with an account of structure factor formalisms, an extensive treatment of the theory, algorithms and crystallographic applications of Fourier methods, and a treatment of symmetry in reciprocal space. In Part 2 of the volume, these general accounts are followed by detailed expositions of crystallographic statistics, direct methods, Patterson techniques, isomorphous replacement and anomalous scattering, and treatments of the role of electron microscopy and diffraction in crystal structure determination. Part 3 deals with applications of reciprocal space to molecular geometry and best plane calculations; it contains a treatment of the principles of molecular graphics and modelling and their applications and concludes with the presentation of a convergence acceleration method of importance in the computation of approximate crystal potentials. The fourth Part contains treatments of various diffuse scattering phenomena arising from crystal dynamics, disorder and low dimensionality liquid crystals, and an exposition of the underlying theories and/or experimental evidence. The volume concludes with an introductory treatment of the theory of interaction of radiation with

matter the so called dynamical theory Insofar as it was possible effects due to all three major diffraction techniques X rays neutrons and electrons are considered The volume is a vital addition to the library of scientists engaged in crystal structure determination crystallographic computing crystal physics and other fields of crystallographic research Graduate students specializing in crystallography will find much material suitable for self study and a rich source of references to the relevant literature *American Scientist* ,1942 Documentation of Plasma Physics.
