Vonsovsky, I. U. Alekサンドрович Изюмов, Ernst Zagidovich Kurmaev, 1982-03 This book should fill a gap which has existed in the literature on superconductivity There have been a number of excellent textbooks available on the phenomenon of superconductivity which describe in detail the variety of effects connected with it and the mathematical techniques to deal with them properly However until now there has not been a textbook available in English which concentrates on the material aspects of superconductivity This is a major shortcoming since most physicists working in the field of superconductivity are mainly concerned with specific materials and subsequently often need to know more about the interplay of superconductivity and material properties On the other hand people working in the field know that a competent and well written book by S V Vonsovsky V A Izyumov and E Z Kurmaev has been available in Russian It presents a thorough discussion of superconducting transition metal alloys and compounds This volume is a translation of an updated version of the Russian edition The translation was done by A P Zavarnitsyn of the authors institution and by Dr E H Brandt of the Max Planck Institut für Metallforschung in Stuttgart The master manuscript was ably typed by Mrs C Pendl I would like to take this opportunity to thank each of them I sincerely hope that the book will turn out to be useful to physicists working in the field of superconductivity as well as to nonspecialists and interested graduate students **Publishers' Trade List Annual, 1980** Bobbs-Merrill Educational Co, 1980 *Books in Series*, 1985 Vols for 1980 issued in three parts Series Authors and Titles
