## **Solitons Properties Dynamics Interactions Applications:**

**Solitons** R. MacKenzie,M.B. Paranjape,W.J. Zakrzewski,2012-12-06 Solitons were discovered by John Scott Russel in 1834 and have interested scientists and mathematicians ever since They have been the subject of a large body of research in a wide variety of fields of physics and mathematics not to mention engineering and other branches of science such as biology This volume comprises the written versions of the talks presented at a workshop held at Queen s University in 1997 an interdisciplinary meeting wherein top researchers from many fields could meet interact and exchange ideas Topics covered include mathematical and numerical aspects of solitons as well as applications of solitons to nuclear and particle physics cosmology and condensed matter physics The book should be of interest to researchers in any field in which solitons are encountered

**Introduction to non-Kerr Law Optical Solitons** Anjan Biswas,Swapan Konar,2006-11-10 Despite remarkable developments in the field a detailed treatment of non Kerr law media has not been published Introduction to non Kerr Law Optical Solitons is the first book devoted exclusively to optical soliton propagation in media that possesses non Kerr law nonlinearities After an introduction to the basic features of fiber optic com

**Current Trends in Analysis and Its Applications** Vladimir V. Mityushev,Michael V. Ruzhansky,2015-02-04 This book is a collection of papers from the 9th International ISAAC Congress held in 2013 in Krak w Poland The papers are devoted to recent results in mathematics

focused on analysis and a wide range of its applications These include up to date findings of the following topics Differential Equations Complex and Functional Analytic Methods Nonlinear PDE Qualitative Properties of Evolution Models Differential and Difference Equations Toeplitz Operators Wavelet Theory Topological and Geometrical Methods of Analysis Queueing Theory and Performance Evaluation of Computer Networks Clifford and Quaternion Analysis Fixed Point Theory M Frame Constructions Spaces of Differentiable Functions of Several Real Variables Generalized Functions Analytic Methods in

Complex Geometry Topological and Geometrical Methods of Analysis Integral Transforms and Reproducing Kernels Didactical Approaches to Mathematical Thinking Their wide applications in biomathematics mechanics queueing models scattering geomechanics etc are presented in a concise but comprehensible way such that further ramifications and future directions can be immediately seen

**The sine-Gordon Model and its Applications** Jesús Cuevas-Maraver,Panayotis G. Kevrekidis,Floyd Williams,2014-07-22 The sine Gordon model is a ubiquitous model of Mathematical Physics with a wide range of applications extending from coupled torsion pendula and Josephson junction arrays to gravitational and high energy physics models The purpose of this book is to present a summary of recent developments in this field incorporating both

introductory background material but also with a strong view towards modern applications recent experiments developments regarding the existence stability dynamics and asymptotics of nonlinear waves that arise in the model This book is of particular interest to a wide range of researchers in this field but serves as an introductory text for young researchers and students interested in the topic The book consists of well selected thematic chapters on diverse mathematical and physical

aspects of the equation carefully chosen and assigned **Algebraic Methods in Physics** Yvan Saint-Aubin, Luc Vinet, 2012-12-06 This book pays tribute to two pioneers in the field of Mathematical physics Jiri Patera and Pavel Winternitz of the CRM Each has contributed more than forty years to the subject of mathematical physics particularly to the study of algebraic methods **Theoretical Physics at the End of the Twentieth Century** Yvan Saint-Aubin, Luc Vinet, 2013-03-14 The Centre de recherches matMmatiques CRM was created in 1968 by the Universite de Montreal to promote research in the mathematical sciences It is now a national institute that hosts several groups and holds special theme years summer schools workshops and a postdoctoral program The focus of its scientific activities ranges from pure to applied mathematics and includes statistics theoretical computer science mathematical methods in biology and life sciences and mathematical and theoretical physics The CRM also promotes collaboration between mathematicians and industry It is subsidized by the Natural Sciences and Engineering Research Council of Canada the Fonds FCAR of the Province de Quebec and the Canadian Institute for Advanced Research and has private endowments Current ac tivities fellowships and annual reports can be found on the CRM Web page at [www.CRM.UMontreal.CA](http://www.CRM.UMontreal.CA) The CRM Series in Mathematical Physics includes monographs lecture notes and proceedings based on research pursued and events held at the Centre de recherches matMmatiques

Calogero—Moser—Sutherland Models Jan F. van Diejen, Luc Vinet, 2012-12-06 In the 1970s F Calogero and D Sutherland discovered that for certain potentials in one dimensional systems but for any number of particles the Schrödinger eigenvalue problem is exactly solvable Until then there was only one known nontrivial example of an exactly solvable quantum multi particle problem J Moser subsequently showed that the classical counterparts to these models is also amenable to an exact analytical approach The last decade has witnessed a true explosion of activities involving Calogero Moser Sutherland models and these now play a role in research areas ranging from theoretical physics such as soliton theory quantum field theory string theory solvable models of statistical mechanics condensed matter physics and quantum chaos to pure mathematics such as representation theory harmonic analysis theory of special functions combinatorics of symmetric functions dynamical systems random matrix theory and complex geometry The aim of this volume is to provide an overview of the many branches into which research on CMS systems has diversified in recent years The contributions are by leading researchers from various disciplines in whose work CMS systems appear either as the topic of investigation itself or as a tool for further applications Mathematical Reviews , 2001 Zeitschrift Für Kristallographie , 2001 The Painlevé Property Robert Conte, 2012-12-06 The subject this volume is explicit integration that is the analytical as opposed to the numerical solution of all kinds of nonlinear differential equations ordinary differential partial differential finite difference Such equations describe many physical phenomena their analytic solutions particular solutions first integral and so forth are in many cases preferable to numerical computation which may be long costly and worst subject to numerical errors In addition the analytic approach can provide a global knowledge of the solution while the numerical approach is always local Explicit integration is based on

the powerful methods based on an in depth study of singularities that were first used by Poincar and subsequently developed by Painlev in his famous Leons de Stockholm of 1895 The recent interest in the subject and in the equations investigated by Painlev dates back about thirty years ago arising from three apparently disjoint fields the Ising model of statistical physics and field theory propagation of solitons and dynamical systems The chapters in this volume based on courses given at Cargse 1998 alternate mathematics and physics they are intended to bring researchers entering the field to the level of present research
