## Soft Interfaces:

**Assemblies of Gold Nanoparticles at Liquid-Liquid Interfaces** Evgeny Smirnov, 2018-04-19 This book is devoted to various aspects of self assembly of gold nanoparticles at liquid liquid interfaces and investigation of their properties. It covers primarily two large fields i self assembly of nanoparticles and optical properties of these assemblies and ii the role of nanoparticles in redox electrocatalysis at liquid liquid interfaces. The first part aroused from a long lasting idea to manipulate adsorption of nanoparticles at liquid liquid with an external electric field to form smart mirrors and or filters. Therefore Chapters 3 to 5 are dedicated to explore fundamental aspects of charged nanoparticles self assembly and to investigate optical properties extinction and reflectance in a through manner. Novel tetrathiafulvalene TTF assisted method leads to self assembly of nanoparticles into cm scale nanofilms or so called metal liquid like droplets MeLLDs with remarkable optical properties. The second part Chapters 6 to 8 clarifies the role of nanoparticles in interfacial electron transfer reactions. They demonstrate how nanoparticles are charged and discharged upon equilibration of Fermi levels with redox couples in solution and how it can be used to perform HER and ORR. Finally Chapter 9 gives a perspective outlook including applications of suggested methods in fast one step preparation of colloidosomes SERS substrates as well as pioneer studies on so called Marangony type shutters drive by the electric field

*Life - As a Matter of Fat* Ole G. Mouritsen, 2005-10-24 Presents a multi

disciplinary perspective on the physics of life and the particular role played by lipids and the lipid bilayer component of cell membranes. Emphasizes the physical properties of lipid membranes seen as soft and molecularly structured interfaces. By combining and synthesizing insights obtained from a variety of recent studies an attempt is made to clarify what membrane structure is and how it can be quantitatively described. Shows how biological function mediated by membranes is controlled by lipid membrane structure and organization on length scales ranging from the size of the individual molecule across molecular assemblies of proteins and lipid domains in the range of nanometers to the size of whole cells. Applications of lipids in nano technology and biomedicine are also described

**Developments in Electrochemistry** Derek Pletcher, Zhong-Qun Tian, David Williams, 2014-06-03

Martin Fleischmann was truly one of the fathers of modern electrochemistry having made major contributions to diverse topics within electrochemical science and technology. These include the theory and practice of voltammetry and in situ spectroscopic techniques, instrumentation, electrochemical phase formation, corrosion, electrochemical engineering, electrosynthesis and cold fusion. While intended to honour the memory of Martin Fleischmann, *Developments in Electrochemistry* is neither a biography nor a history of his contributions. Rather the book is a series of critical reviews of topics in electrochemical science associated with Martin Fleischmann but remaining important today. The authors are all scientists with outstanding international reputations who have made their own contribution to their topic, most have also worked with Martin Fleischmann and benefitted from his guidance. Each of the 19 chapters within this volume begin with an outline of Martin Fleischmann's contribution to the topic followed by examples of research, established applications and prospects for future developments. The book is of interest to both students and experienced workers in universities and industry who are active in developing electrochemical science.
