Software Agents:

  Intelligent Software Agents Walter Brenner,Rüdiger Zarnekow,Hartmut Wittig,2012-12-06 2 chapter contains examples of intelligent agents arranged according to their appli cation areas Chapter 7 closes with a prospective view of the future development of intelligent agents Everyone concerned with the Internet and the new possibilities of information and communication technology knows that nowadays there is no area that is devel oping faster The authors are aware of the dynamics of this research area and its effects when they describe such a fast developing area in a slow traditional me dium like a book One thing is sure today when the book appears on the market new intelligent agents will already exist and some of the hypotheses made by this book will have been shown to be incorrect Why despite this does it make sense to write a classical book on this subject Is there an alternative Experience shows that the majority of the people in business and public life who make decisions on the use of new technologies continue to prefer books and articles in periodicals rather than electronic sources such as the Internet Or is there some other reason for the enormous success of Nicolas Negroponte s book Being Digital which we thank for multimedia and many concepts of the digital and networked world and even intelligent agents Today a book is still the only way to establish a new area   *Software Agents for Future Communication Systems* Alex Hayzelden,John Bigham,2012-12-06 Agent technology has recently become one of the most vibrant and fastest growing areas in information technology And advanced digital communicatiion is a central enabling technology for the coming information society So software agents and their exploitation for future communication systems are attracting particular attention from the research and development community as well as from economic and user communities interested in everyday private and professional digital communication applications This monograph like anthology is the first systematic introduction to software agents and future communication systems Fifteen coherently written chapters by leading software agent researchers provide complementary coverage of the relevant issues Multi agent systems and mobile agent approaches are presented in a well balanced way and applied to most important topics in future communication systems In addition the volume editors have provided a detailed introductory survey chapters   **Software Agents** Jeffrey M. Bradshaw,1997 The essays in Software Agents by leading researchers and developers of agent based systems address both the state of the art in agent technology and its likely evolution in the near future   **Software Agents, Agent Systems and Their Applications** Mohamed Essaaidi,Maria Ganzha,Marcin Paprzycki,2012 Seen by many as the next revolution in software development for large complex distributed systems agent systems represent one of the more exciting research areas in computer science With the development of powerful personal devices the vision of a personal agent now seems increasingly appealing too It can even be claimed that intelligent software agents will eventually become an essential part of Web 4 0 Software agents are finding their way into areas such as environmental security climate change seismic safety epidemic prevention detection and response computer emergency response and human and societal dynamics Because these are of direct interest to the NATO

Science for Peace and Security Program a NATO Advanced Study Institute ASI dealing with the subject was held in Tangier Morocco in September 2010 This book presents the content of that ASI This book is divided into three sections Foundations Applications and Student Papers Subjects covered include agent system modeling system design and experimentation sensor networks disaster management ehealth and medical emergencies management of UAVs and agents in the grid Agent systems security and the application of agents in network security are also addressed and the final section includes participant presentations The book has been designed to be usable as a textbook for example in a graduate course covering software agents agent systems and their applications and will be of interest to all those involved in related fields *Software Agent-Based Applications, Platforms and Development Kits* Rainer Unland,Matthias Klusch,Monique Calisti,2006-01-27 This book introduces major agent platforms frameworks systems tools and applications Each system is described by their developers in sufficient detail so that the reader can get a good understanding of the architecture functionality and application areas of the system All systems are running systems One main focus of the book lies on agent platforms and toolkits **Applications of Software Agent Technology in the Health Care Domain** Antonio Moreno,John L. Nealon,2003-10-24 This volume contains a collection of papers that provides a unique novel and up to date overview of how software agents technology is being applied in very diverse problems in health care ranging from community care to management of organ transplants It also provides an introductory survey that highlights the main issues to be taken into account when deploying agents in the health care area The intended audience includes graduate and postgraduate students specializing in artificial intelligence and researchers interested in the application of new technologies **Software Agents and Soft Computing: Towards Enhancing Machine Intelligence** Hyacinth S. Nwana,1997-01-22 This carefully arranged book is mainly based on work done by the Intelligent Systems Research Group at BT Laboratories essentially in cooperation with internationally leading scientists from outside BT It opens with a detailed introduction surveying the area and putting the work presented in context Conceptual issues surrounding intelligent agents and multi agent systems are investigated and the practical and industrial applicability of this exciting new technology is demonstrated One section is devoted to the rationale philosophy and techniques of the emerging area of soft computing The final section outlines the broader context in dealing with machine intelligence in general and intelligent software systems in particular *Industrial Agents* Paulo Leitão,Stamatis Karnouskos,2015-03-13 Industrial Agents explains how multi agent systems improve collaborative networks to offer dynamic service changes customization improved quality and reliability and flexible infrastructure Learn how these platforms can offer distributed intelligent management and control functions with communication cooperation and synchronization capabilities and also provide for the behavior specifications of the smart components of the system The book offers not only an introduction to industrial agents but also clarifies and positions the vision on going efforts example applications assessment and roadmap applicable to multiple industries This edited work is guided and co authored by leaders

of the IEEE Technical Committee on Industrial Agents who represent both academic and industry perspectives and share the latest research along with their hands on experiences prototyping and deploying industrial agents in industrial scenarios Learn how new scientific approaches and technologies aggregate resources such next generation intelligent systems manual workplaces and information and material flow system Gain insight from experts presenting the latest academic and industry research on multi agent systems Explore multiple case studies and example applications showing industrial agents in a variety of scenarios Understand implementations across the enterprise from low level control systems to autonomous and collaborative management units   Multiple Criteria Decision Making in Application Layer Networks Frank Schneider,2010-12 Diploma Thesis from the year 2008 in the subject Computer Science Commercial Information Technology grade 1 3 University of Bayreuth Lehrstuhl f r Wirtschaftsinformatik BWL VII language English abstract This work is concerned with the conduct of Multiple Criteria Decision Making MCDM by intelligent software agents trading digital commodities in Application Layer Networks ALN such as grids or clouds These agents consider trustworthiness in their course of negotiation and select offers with respect to product price and seller reputation To automate the selection process we seek an appropriate MCDM method that provides clear advice for an agent prior to negotiating We compare eleven well known MCDM methods and choose the TOPSIS approach of Hwang and Yoon since it produces comprehensible and plausible results with a justifiable amount of effort We modify the method and present a draft named xTOPSIS that promises intertemporal performance analysis for further automatation The resulting tool is finally tested and evaluated in the context of a scenario similar to the eRep Social Knowledge for e Governance project   **Agent-Oriented Software Engineering** Onn Shehory,Arnon Sturm,2014-06-02 With this book Onn Shehory and Arnon Sturm together with further contributors introduce the reader to various facets of agent oriented software engineering AOSE They provide a selected collection of state of the art findings which combines research from information systems artificial intelligence distributed systems and software engineering and covers essential development aspects of agent based systems The book chapters are organized into five parts The first part introduces the AOSE domain in general including introduction to agents and the peculiarities of software engineering for developing MAS The second part describes general aspects of AOSE like architectural models design patterns and communication Next part three discusses AOSE methodologies and associated research directions and elaborates on Prometheus O MaSE and INGENIAS Part four then addresses agent oriented programming languages Finally the fifth part presents studies related to the implementation of agents and multi agent systems The book not only provides a comprehensive review of design approaches for specifying agent based systems but also covers implementation aspects such as communication standards and tools and environments for developing agent based systems It is thus of interest to researchers practitioners and students who are interested in exploring the agent paradigm for developing software systems   **Applications of Software Agent Technology in the Health Care Domain** Antonio Moreno,John L. Nealon,2012-12-06

Agent Cities 4 is an ambitious project whose main aim is the construction of a worldwide publicly accessible network of agent based FIPA platforms In March 2003 there are around 50 active platforms Each of them supports agents that offer services similar to those that can be found in a real city facilities amenities attractions information and commercial services It is expected that in the near future it will be possible to implement intelligent complex compound services e g agents that are able to help a user to plan a weekend away including tasks such as booking air tickets selecting and booking a room in an appropriate hotel buying tickets for the theatre and reserving a table in a restaurant that is near the theatre and offers the user s favourite meal The main aim of our work was to develop a set of agents that could offer to the citizens and visitors of a city not the usual leisure oriented services but health care related services This interest is related with previous work that our research group had done in the last years in the application of AI techniques especially agent based technology to the medical domain see e g 6 Therefore we decided to design and implement a multi agent system with the following features The user may request information about all the medical centres available in a particular geographical area *Software Engineering for Multi-agent Systems ...* ,2004 **Implementing Application Frameworks** Mohamed E. Fayad,Douglas C. Schmidt,1999-10-11 Object Technology A gold mine of enterprise application frameworks Implementing Application Frameworks While frameworks can save your company millions in development costs over time the initial investment can be quite high This book CD ROM package helps you to reduce the cost of framework development by providing 40 case studies documenting the experiences of framework builders and users at major corporations and research labs worldwide Throughout the authors extract important lessons and highlight technical and organizational implementation practices that have been proven to yield the biggest payoff Focusing primarily on business systems and agent based application frameworks it covers frameworks for Data processing Agent based applications Artificial intelligence applications Object oriented business processes System application frameworks Programming languages and tools And much more The enclosed CD ROM gives you Example frameworks Documentation and manuals Framework code and implementation tips Sample framework architectures and models Design patterns and presentations Animated demonstrations *Libri* ,1996 Vols 4 24 include Communications of the International Federation of Library Associations IFLA FIAB Intelligent Software Agents Richard Murch,Tony Johnson,1999 This book discusses the current state of the use and possible uses of intelligent agent technology *Software Engineering for Large-Scale Multi-Agent Systems* Alessandro Garcia,2003-04-15 Nowadays engineering large scale software systems means dealing with complex systems composed of pervasive software components that move around and adapt to nondeterministic and open environments like the Internet in order to achieve systems design goals through the coordination of autonomously distributed services The agent metaphor in particular software agents and multi agent systems MAS constitutes a promising approach for covering most of the software development life cycle from conceptual modeling and requirements specification to architectural definition design and implementation This book presents 17 carefully

reviewed papers arranged in order to provide a coherent survey of how to exploit agent properties and MAS issues in today s software systems The book offers the following topical sections software engineering foundations requirements engineering and software architecture coordination and mobility reuse dependability empirical studies and applications *Holonic and Multi-agent Systems for Manufacturing* ,2003 **Software-Agents and Liberal Order** Dirk Nicolas Wagner,2001 Liberal order and software agents long established ideas and modern technology are bridged The impulse for undertaking this effort comes from the observation that it becomes difficult for computer science alone to create order for and within machines The growing complexity of computer systems open networks like the Internet and the increasingly social role of software entities push the traditional quest for total global control out of reach Economic theory of social order offers extensive experience with such conditions so that it can complement and guide research in computer science It is shown that a common understanding between economics and computer science s sub field of distributed artificial intelligence is possible on the level of software agents On this basis four fundamental problems of social order are encircled first the requirement to overcome and prevent state of nature situations in the sense of Thomas Hobbes second the necessity to accommodate unpredictable individual actors third the challenge of exiting the small worlds of traditional software systems and fourth the ambition to reach a transaction cost efficient social order Economics can contribute to an understanding and to possible solutions of these problems by unfolding the idea of liberal order for software agents In a systematic analysis that covers the order of rules the model of the individual actor and the order of actions it is shown that the conditions for liberal order can be created without exception in agent environments *Agent-Based Software Development* ,2004 *Agent-Oriented Software Engineering VII* Lin Padgham,Franco Zambonelli,2007-08-06 This book constitutes the thoroughly refereed post proceedings of the 7th International Workshop on Agent Oriented Software Engineering AOSE 2006 held in Hakodate Japan in May 2006 as part of AAMAS 2006 The 13 revised full papers are organized in topical sections on modeling and design of agent systems modeling open agent systems formal reasoning about designs as well as testing debugging and evolvability
