Its unique focus is on component models the cornerstone of component based software development. In addition it presents and analyses existing approaches according to these desiderata. This compendium is an indispensable textbook for an advance undergraduate or postgraduate course unit. Researchers will also find this volume an essential reference material *Software Engineering and Advanced Applications; Proceedings IEEE Computer Society*, Michel R. V. Chaudron, European Organisation for Information Technology and Microelectronics, 2010 **Security and Quality in Cyber-Physical Systems Engineering** Stefan Biffl, Matthias Eckhart, Arndt Lüder, Edgar Weippl, 2019-11-09 This book examines the requirements risks and solutions to improve the security and quality of complex cyber physical systems (CPS) such as production systems power plants and airplanes in order to ascertain whether it is possible to protect engineering organizations against cyber threats and to ensure engineering project quality. The book consists of three parts that logically build upon each other. Part I Product Engineering of Complex Cyber Physical Systems discusses the structure and behavior of engineering organizations producing complex cyber physical systems providing insights into processes and engineering activities and highlighting the requirements and border conditions for secure and high quality engineering. Part II Engineering Quality Improvement addresses quality improvements with a focus on engineering data generation, exchange, aggregation and use within an engineering organization and the need for proper data modeling and engineering result validation. Lastly Part III Engineering Security Improvement considers security aspects concerning CPS engineering including engineering organizations security assessments and engineering data management security concepts and technologies that may be leveraged to mitigate the manipulation of engineering data as well as design and run time aspects of secure complex cyber physical systems. The book is intended for several target groups it enables computer scientists to identify research issues related to the development of new methods architectures and technologies for improving quality and security in multi disciplinary engineering pushing forward the current state of the art. It also allows researchers involved in the engineering of CPS to gain a better understanding of the challenges and requirements of multi disciplinary engineering that will guide them in their future research and development activities.
