In *Civilizations* Felipe Fernandez Armesto once again proves himself a brilliantly original historian capable of large minded and comprehensive works here he redefines the subject that has fascinated historians from Thucydides to Gibbon to Spengler to Fernand Braudel the nature of civilization To Fernandez Armesto a civilization is civilized in direct proportion to its distance its difference from the unmodified natural environment by its taming and warping of climate geography and ecology The same impersonal forces that put an ocean between Africa and India a river delta in Mesopotamia or a 2 000 mile long mountain range in South America have created the mold from which humanity has fashioned its own wildly differing cultures In a grand tradition that is certain to evoke comparisons to the great historical taxonomies each chapter of *Civilizations* connects the world of the ecologist and geographer to a panorama of cultural history In *Civilizations* the medieval poem Sir Gawain and the Green Knight is not merely a Christian allegory but a testament to the thousand year long deforestation of the trees that once covered 90 percent of the European mainland The Indian Ocean has served as the world's greatest trading highway for millennia not merely because of cultural imperatives but because the regular monsoon winds blow one way in the summer and the other in the winter In the words of the author Unlike previous attempts to write the comparative history of civilizations it is arranged environment by environment rather than period by period or society by society Thus seventeen distinct habitats serve as jumping off points for a series of brilliant set piece comparisons thus tundra civilizations from Ice Age Europe are linked with the Inuit of the Pacific Northwest and the Mississippi mound builders and the deforesters of eleventh century Europe are both understood as civilizations built on woodlands Here of course are the familiar riverine civilizations of Mesopotamia and China of the Indus and the Nile but also highland civilizations from the Inca to New Guinea island cultures from Minoan Crete to Polynesia to Renaissance Venice maritime civilizations of the Indian Ocean and South China Sea even the Bushmen of Southern Africa are seen through a lens provided by the desert civilizations of Chaco Canyon More here are fascinating stories brilliantly told of the voyages of Chinese admiral Chen Ho and Portuguese commodore Vasco da Gama of the Great Khan and the Great Zimbabwe Here are Hesiod's tract on maritime trade in the early Aegean and the most up to date genetics of seed crops Erudite wide ranging a work of dazzling scholarship written with extraordinary flair *Civilizations* is a remarkable achievement a tour de force by a brilliant scholar *Out of the Earth* Daniel Hillel,1992-09-30 A moving tribute to the physical and spiritual properties of nature's richest element by one of the world's leading soil conservationists Soil and Civilization, A Modern Concept of the Soil and the Historical Development of

The Soils of Egypt Hassan El-Ramady,Tarek Alshaal,Noura Bakr,Tamer Elbana,Elsayed Mohamed,Abdel-Aziz Belal,2018-08-20 This book reviews the distribution of soils across Egypt their history genesis pollution and management The conservation of Egyptian soils soils and their connections to human activities as well as some future soil issues are also highlighted It is well known that soil is the main source for food feed fuel and fiber production Accordingly the study of soils is not only a crucial issue but also an urgent task for all nations worldwide Due to their important roles in agroecosystems as well as many aspects of our lives soils have direct and indirect functions in the agricultural industrial and medicinal sectors Therefore understanding the physical chemical and biological properties of soils as well as soil security have now become emerging issues Climate change has a very dangerous dimension in Egypt concerning the rising sea level Many coastal zones are already threatened by this sea level rise and may ultimately disappear At the same time water shortages and soil pollution represent the main challenges for the Egyptian nation Generally speaking the environmental challenges that Egypt now faces include improving and sustaining soil health soil carbon sequestration wastewater treatment and avoiding the overuse of fertilizers and pesticides Therefore this book examines in detail the soils of Egypt from various perspectives including their genesis history classification pollution and degradation soil security soil fertility and land uses Toward a Global History of Soil ,2025-12-15 Toward a Global History of Soil unearths material expertise about soil in the early modern world that has remained largely unexamined outside of the study of agricultural history Its eleven chapters reveal how experimental investigations transformed the economics of land administration the treatment of disease and hydraulic engineering New methodologies to evaluate the productive qualities of soil led to radical changes in medicine chemistry botany and household management This book is the first to examine how the emergence of practical systematic attempts to understand the nature of soil contributed to the development of early

modern sciences The Soils of Brazil Carlos E. G. R. Schaefer, 2023-05-23 This book represents the first comprehensive edition in English on the soils of Brazil in the challenge of illustrating all the biomes of a country of truly continental dimension In addition to presenting the first geosystemic view of Brazilian soils in all geological geomorphological and environmental aspects the book also makes a key contribution to the discussion of current topics in Pedology such as Anthrosols Technosols Soil Management trends and sustainability Pedometrics and advanced techniques of digital soil mapping The soils of Brazil were conveniently stratified into sectors and treated within the different biomes without neglecting any area of the Brazilian territory Considering the aspects of the landscape of occurrence climates geomorphology and geology each pedological region was abundantly documented with soil profile data and many fine original three dimensional illustrations and diagrams made with care by the authors Among the regions the most important are the forested Amazon the Central Plateau with Cerrados the Caatingas of the northeastern semi arid region the Atlantic Forest in all known variants in addition the Restingas Mangroves Oceanic Islands Wetlands of the Pantanal and the subtropical regions of the Pampa and Matas de Araucaria The book is of great importance as the first published work on Brazilian soils but it is of great interest to geologists and geomorphologists who study the tropics and subtropics due to the novelty and scope of the work Farming for the Long Haul Michael Foley, 2019-02-01 It s all but certain that the next fifty years will bring enormous not to say cataclysmic disruptions to our present way of life World oil reserves will be exhausted within that time frame as will the lithium that powers today s most sophisticated batteries suggesting that transportation is equally imperiled And there s another even more dire limitation that is looming at current rates of erosion the world s topsoil will be gone in sixty years Fresh water sources are in jeopardy too In short the large scale agricultural and food delivery system as we know it has at most a few decades before it exhausts itself and the planet with it Farming for the Long Haul is about building a viable small farm economy that can withstand the economic political and climatic shock waves that the twenty first century portends It draws on the innovative work of contemporary farmers but more than that it shares the experiences of farming societies around the world that have maintained resilient agricultural systems over centuries of often turbulent change Indigenous agriculturalists peasants and traditional farmers have all created broad strategies for survival through good times and bad and many of them prospered They also developed particular techniques for managing soil water and other resources sustainably Some of these techniques have been taken up by organic agriculture and permaculture but many more of them are virtually unknown even among alternative farmers This book lays out some of these strategies and presents techniques and tools that might prove most useful to farmers today and in the uncertain future Earth Matters Richard Bardgett, 2016-01-28 For much of history soil has played a major and often central role in the lives of humans Entire societies have risen and collapsed through the management or mismanagement of soil farmers and gardeners worldwide nurture their soil to provide their plants with water nutrients and protection from pests and diseases major battles have been aborted or

stalled by the condition of soil murder trials have been solved with evidence from the soil and for most of us our ultimate fate is the soil In this book Richard Bardgett discusses soil and the many and sometimes surprising ways that humanity has depended on it throughout history and still does today Analysing the role soil plays in our own lives despite increasing urbanization and in the biogeochemical cycles that allow the planet to function effectively Bardgett considers how superior soil management could combat global issues such as climate change food shortages and the extinction of species Looking to the future Bardgett argues that it is vital for the future of humanity for governments worldwide to halt soil degradation and to put in place policies for the future sustainable management of soils The Economic History of the United States: The farmer's last frontier, by F.A. Shannon ,1959
