**Solution Chemistry of Surfactants** K.L. Mittal, 2012-12-06 The 52nd Colloid and Surface Science Symposium of the Division of Colloid and Surface Chemistry of the American Chemical Society was held in Knoxville TN June 12-14 1978 and one of its Sections was devoted to the topic of Solution Chemistry of Surfactants Although it was billed as the Section on Solution Chemistry of Surfactants but it was indeed a veritable international symposium on this topic as 51 papers by about 100 contributors from 12 countries were listed in the program The present volume and its companion volume 2 document the proceedings of the above mentioned Section on Solution Chemistry of Surfactants In 1976 there was held an international symposium on Micellization Solubilization and Microemulsions in Albany the proceedings of which have been chronicled in two volumes A great deal of material dealing with micelles contributed by a legion of prominent researchers constitutes these volumes but a few subtopics were not adequately covered so it was deemed appropriate to cover these topics as well as the recent progress in the general area of aggregation of surfactants in this Section Also as it is the amphiphilicity or amphipathicity of a surfactant molecule which is responsible for both adsorption at interfaces and aggregation in solution so it was considered quite apropos to include the topic of adsorption at interfaces in this Section Concomitantly the present volumes not only cover the aggregation phenomena but also the adsorption at interfaces

**Solution Behavior of Surfactants** K. L. Mittal, Eleanor J. Fendler, 1982

This symposium represented the third event in the series of symposia dealing with the topic of surfactants in solution. In this symposium a number of ramifications of surfactants were covered. It should be added that both aggregation and adsorption of surfactants were covered and the applications of surfactants were given due cognizance. A number of speakers were specifically asked to provide state of the art overviews of certain topics and those were augmented by unpublished original research contributions.

**Surfactants and Polymers in Aqueous Solution** Bo Jönsson, Björn Lindman, Krister Holmberg, Bengt Kronberg, 1998-03-20. A unique book which discusses the solution chemistry of surfactants and polymers presenting both the theory of surfactant and polymer interactions and also giving practical help for workers in this area. Surfactants are used together with polymers in a wide range of applications such as detergents, paints, paper coatings, food, pharmacy and cosmetics. Together the surfactant and polymer provide the stability, rheology, etc. needed for specific application. Hence the need for knowledge about physicochemical properties of both surfactants and polymers and polymer-surfactant interactions to enhance formulation work. This book, based on successful courses run by the authors, brings the two topics together to enable readers to gain a good understanding of the solution behaviour of surfactant-polymer combinations. It includes a thorough description of surfactant types including their main synthetic routes and discusses physicochemical phenomena such as self-assembly, adsorption, gel formation and foaming. Particular attention is paid to the solution behaviour of surfactants and polymers containing polyoxyethylene chains. Surface active polymers are then presented and their interaction with surfactants is a core topic of the book. The choice of surfactant for emulsions and microemulsions is treated in depth and important applications of microemulsions such as detergency and enhanced oil recovery are presented. This book will be invaluable for scientists and engineers involved in surfactant production and formulation as well as students.

*Surfactants and Polymers in Aqueous Solution* Krister Holmberg, Bo Jönsson, Bengt Kronberg, Björn Lindman, 2002-11-22. Many industrial formulations such as detergents, paints, foodstuff and cosmetics contain both surfactants and polymers and their interaction governs many of the properties. This book is unique in that it discusses the solution chemistry of both surfactants and polymers and also the interactions between the two. The book, which is based on successful courses given by the authors since 1992, is a revised and extended version of the first edition that became a market success with six reprints since 1998. *Surfactants and Polymers in Aqueous Solution* is broad in scope, providing both theoretical insights and practical help for those active in the area. This book contains a thorough discussion of surfactant types and gives information of main routes of preparation. A chapter on novel surfactants has been included in the new edition. Physicochemical phenomena such as self-assembly in solution, adsorption, gel formation and foaming are discussed in detail. Particular attention is paid to the solution behaviour of surfactants and polymers containing polyoxyethylene chains. Surface active polymers are presented and their interaction with surfactants is a core topic of the book. Protein-surfactant interaction is also important and a new

chapter deals with this issue Microemulsions are treated in depth and several important application such as detergency and their use as media for chemical reactions are presented Emulsions and the choice of emulsifier is discussed in some detail The new edition also contains chapters on rheology and wetting Surfactants and Polymers in Aqueous Solution is aimed at those dealing with surface chemistry research at universities and with surfactant formulation in industry
