## **The Breaking Wave:**

The Breaking Wave Nevil Shute, 1964      **The Breaking Wave** ,      Breaking Waves Michael L. Banner, Roger H.J. Grimshaw, 2012-12-06 Wave breaking is a commonly occurring phenomena associated with wave motion in fluids often inducing significant effects which are of fundamental and technological importance A familiar illustration is provided with white capping and microbreaking of the wind driven ocean surface waves which is believed to play an important part in the transfers of momentum mass and heat across the air sea interface as well as in the production of underwater ambient noise and augmented microwave backscatter The enhanced hydrodynamic forces associated with the breaking of the more energetic ocean wave components constitute a significant challenge in ocean engineering coastal engineering and naval architecture Other less conspicuous but equally important manifestations are the breaking of internal waves and the filamentation of vorticity interfaces Despite recent theoretical and observational progress towards a more complete understanding of wave breaking mathematical descriptions of its onset and consequences are presently lacking The aim of this Symposium was to bring together theoretical and observational expertise with the goal of determining the current state of knowledge of wave breaking and providing a stimulus to future research The Symposium focused on water waves of all scales from capillary waves to ocean swell but also considered internal waves and the filamentation of vorticity interfaces Specific topics included were Fundamental theoretical studies wave instabilities routes to breaking Models of wave breaking Field observations including statistical information Laboratory studies Shoaling waves breaking waves on currents breaking induced by the motion of a ship      **An Experimental Study of Breaking-wave Pressures** William J. Garcia, 1968      **The Breaking Wave** Vivian L. Werner, 1963      *The Breaking Wave* Nevil Shute Norway, 2022-08-16 In *The Breaking Wave* Nevil Shute crafts a poignant narrative that weaves together elements of human emotion resilience and the inexorable passage of time Set against the backdrop of post war Australia the novel delves into the complexities of love and loss as it follows a young couple grappling with societal expectations and their own aspirations Shute's lyrical prose is marked by a keen observational detail and a sense of realism that permeates the characters experiences reflecting the broader uncertainties of a world emerging from conflict This literary work resonates deeply within the context of 20th century literature as it explores themes of displacement and renewal mirroring the existential crises faced by many during that era Nevil Shute an English born author and aviation engineer drew on his own life experiences and his fascination with flight and the world's tumultuous changes to enrich his storytelling His extensive travels and profound understanding of human nature informed his narratives allowing him to create immersive worlds where characters confront their innermost fears and desires This unique background positions Shute as a critical voice in exploring the dynamics of shifting cultural landscapes Readers seeking a heartfelt exploration of personal struggle and triumph will find *The Breaking Wave* both compelling and relatable Shute's masterful evocation of character and place invites readers to reflect on their own journeys making this novel a

thoughtful addition to any literary collection For those interested in narratives that probe the depths of human experience amidst changing tides this work is highly recommended

**THE BREAKING WAVE** Kevin Davis,1990    The Breaking Wave Ruth Goode,1955    **Breaking Wave** Telford Taylor,1989-06-01    Breaking Wave Spectrum in Water of Finite Depth in the Presence of Current C. C. Tung,Norden Eh Huang,1987 This report presents an approximate method to compute the mean value the mean square value and the spectrum of waves in water of finite depth taking into account the effect of wave breaking in the presence of current It is assumed that there exists a linear and Gaussian ideal wave train whose spectrum is first obtained using the wave energy flux balance equation without considering wave breaking The Miche wave breaking criterion for waves in finite water depth is used to limit the wave elevation and establish an expression for the breaking wave elevation in terms of the elevation and its second time derivative of the ideal waves Simple expressions for the mean value the mean square value and the spectrum are obtained These results are applied to the case in which a deepwater unidirectional wave train propagating normally toward a straight shoreline over gently varying sea bottom of parallel and straight contours encounters an adverse steady current whose velocity is assumed to be uniformly distributed with depth Numerical results are obtained and presented in graphic form    Effects of a Breakwater on Nearshore Currents Due to Breaking Waves Philip L. F. Liu,Chiang C. Mei,Coastal Engineering Research Center (U.S.),1974 This study provides a semiempirical theory of nearshore currents due to breaking waves in the presence of a shore connected breakwater or an offshore breakwater The effects of diffraction are studied in addition to refraction by shoaling waters The concept of radiation stresses applied to uniform longshore current and rip currents forms the starting point of the theory Many empirical relations included in this study with regard to the surf zone are similar to and extrapolations of the ones used in related works Ignoring convective inertia and lateral turbulent diffusion the governing equations are solved numerically by the method of finite differences Sample results for stream functions and mean sea levels are plotted for various beach profiles or incidence angles For the offshore breakwater the predicted current pattern is consistent with available laboratory observations and the known tendency of tombolo formation for the shore connected breakwater the computed flow pattern exhibits cells in both downwave and upwave regions Directly relevant observations have not been found but part of the predicted features has some indirect experimental support More experimental and theoretical work is suggested
