## **The Calculation Of Two:**

**Optimization for Decision Making II** Víctor Yépes, José M. Moreno-Jiménez, 2020-11-25 In the current context of the electronic governance of society both administrations and citizens are demanding the greater participation of all the actors involved in the decision making process relative to the governance of society. This book presents collective works published in the recent Special Issue SI entitled Optimization for Decision Making II. These works give an appropriate response to the new challenges raised. The decision making process can be done by applying different methods and tools as well as using different objectives. In real life problems the formulation of decision making problems and the application of optimization techniques to support decisions are particularly complex and a wide range of optimization techniques and methodologies are used to minimize risks, improve quality in making decisions or in general to solve problems. In addition a sensitivity or robustness analysis should be done to validate and analyze the influence of uncertainty regarding decision making. This book brings together a collection of inter multi disciplinary works applied to the optimization of decision making in a coherent manner.
