Rethinking Authority in Global Climate Governance Thomas Hickmann, 2015-10-16 In the past few years numerous authors have highlighted the emergence of transnational climate initiatives such as city networks private certification schemes and business self regulation in the policy domain of climate change While these transnational governance arrangements can surely contribute to solving the problem of climate change their development by different types of sub and non state actors does not imply a weakening of the intergovernmental level On the contrary many transnational climate initiatives use the international climate regime as a point of reference and have adopted various rules and procedures from international agreements *Rethinking Authority in Global Climate Governance* puts forward this argument and expands upon it using case studies which suggest that the effective operation of transnational climate initiatives strongly relies on the existence of an international regulatory framework created by nation states Thus this book emphasizes the centrality of the intergovernmental process clustered around the United Nations Framework Convention on Climate Change UNFCCC and underscores that multilateral treaty making continues to be more important than many scholars and policy makers suppose This book will be of great interest to students and scholars of global environmental politics climate change and sustainable development

Rethinking Private Authority Jessica F. Green, 2013-12-22 Rethinking Private Authority examines the role of non state actors in global environmental politics arguing that a fuller understanding of their role requires a new way of conceptualizing private authority Jessica Green identifies two distinct forms of private authority one in which states delegate authority to private actors and another in which entrepreneurial actors generate their own rules persuading others to adopt them Drawing on a wealth of empirical evidence spanning a century of environmental rule making Green shows how the delegation of authority to private actors has played a small but consistent role in multilateral environmental agreements over the past fifty years largely in the area of treaty implementation This contrasts with entrepreneurial authority where most private environmental rules have been created in the past two decades Green traces how this dynamic and fast growing form of private authority is becoming increasingly common in areas ranging from organic food to green building practices to sustainable tourism She persuasively argues that the configuration of state preferences and the existing institutional landscape are paramount to explaining why private authority emerges and assumes the form that it does In depth cases on climate change provide evidence for her arguments Groundbreaking in scope Rethinking Private Authority demonstrates that authority in world politics is diffused across multiple levels and diverse actors and it offers a more complete picture of how

private actors are helping to shape our response to today's most pressing environmental problems

Handbook of Global Environmental Politics Peter Dauvergne, 2005 The book's greatest strength is the range and theoretical ambition of its contributions to regime theory, governance and international cooperation. Recommended for Graduate students, researchers and faculty. D. L. Feldman, Choice The first Handbook of original articles by leading scholars of global environmental politics, this landmark volume maps the latest theoretical and empirical research in this young and growing field. Captured here are the dynamic and energetic debates over concerns for the health of the planet and how they might best be addressed. The introductory chapters explore the intellectual trends and evolving parameters in the field of global environmental politics. They make a case for an expansive definition of the field, one that embraces an interdisciplinary literature on the connections between global politics and environmental change. The remaining chapters are divided into three broad themes: states, governance and security, capitalism, trade and corporations, and knowledge, civil societies and ethics, with each section providing a cohesive discussion of current issues. In-depth explorations are given to topics such as global commons, renewable energy, the effectiveness of environmental cooperation, regulations and corporate standards, trade liberalization and global environmental governance, and science and environmental citizenship. A comprehensive survey of the latest research, the Handbook is a necessary reference for scholars, students and policymakers in the field of global environmental politics.

Business Power and Conflict in International Environmental Politics R. Falkner, 2017-03-07 This book puts forward a distinctive theoretical approach and analytical framework for studying business as an international actor in the environmental field and provides detailed case studies of the most important environmental challenges in recent years.

Environmental Governance Gabriela Kütting, Ronnie Lipschutz, 2012-08-21 This edited collection makes a highly significant critical contribution to the field of environmental politics. It argues that the international level institutionalist approach to global environmental politics has run its course, employed solely by powerful actors in order to orchestrate and manipulate local communities within a continuing hegemonic system. The outstanding international line-up of contributors to this volume explore the real advances that are being made in the areas where the local and global intersect and how power fits into the equation. They explore the relationship between governance, power and knowledge, using power as the main analytical tool. The contributors adopt a variety of approaches and perspectives, some starting from the local level and shifting upward to the global, and some using a global perspective that narrows down to the local. Some chapters explore specific case studies and others employ a more conceptual framework, but all of them bring a new dimension to the relationship between power and knowledge in environmental governance. Power here is explored in all its guises, from relational to structural power. An important and timely exploration of a topic at the forefront of global debate. Environmental Governance is essential reading for all students of global environmental politics, international political economy and international relations.
