Iteration Theory Ecit 87 European Conference:

European Conference on Iteration Theory Claudi Alsina,1989 Combinatorial Dynamics And Entropy In Dimension One (2nd Edition) Luis Alseda,Jaume Llibre,Michal Misiurewicz,2000-10-31 This book introduces the reader to the two main directions of one dimensional dynamics The first has its roots in the Sharkovskii theorem which describes the possible sets of periods of all cycles periodic orbits of a continuous map of an interval into itself The whole theory which was developed based on this theorem deals mainly with combinatorial objects permutations graphs etc it is called combinatorial dynamics The second direction has its main objective in measuring the complexity of a system or the degree of chaos present in it for that the topological entropy is used The book analyzes the combinatorial dynamics and topological entropy for the continuous maps of either an interval or the circle into itself *Aggregating clones, colors, equations, iterates, numbers, and tiles* Janos Aczel,2012-12-06 The journal aequationes mathematicae publishes papers in pure and applied mathematics and in particular articles on functional equations combinatorics and dynamical systems Its 50th volume appears in 1995 To mark this occasion we are publishing in book form a repre sentative collection of outstanding survey papers assembled for our anniversary issue of aequationes mathematicae The articles by Quackenbush Targonski and Moszner discuss composition of functions from different points of view universal algebra dynamical systems iteration and functional equa tions The Ono Robbins Wahl and the Vince papers on number theory and tiles respectively are thematically linked by lattices Combinatorics in turn links the Vince paper with that of Tutte whose subject is chromatic sums its tools differential and functional equations The Paganoni Ratz and the Forti papers deal with conditional functional equations and with the related topic of stability Applications to the social and behavioral sciences in particular to aggregation and some theory are presented in the paper by J Aczel The aim of the collection is to survey selected fields of current interest We trust that it will be useful and informative for researchers teachers graduate and advanced undergraduate stu dents of mathematics and for those interested in applications in related fields lanDs Aczel Aequationes Mathematicae 50 1995 1 0001 9054 95 020001 01 1 50 0 20 0 University of Waterloo 1995 Birkhiiuser Verlag Basel Editorial Volume 50 of Aequationes Mathematicae This is the fiftieth volume of aequationes mathematicae Not only our modesty but also lack of space keeps us from self congratulation Sharkovsky Ordering Alexander M. Blokh,Oleksandr M. Sharkovsky,2022-09-05 This book provides a comprehensive survey of the Sharkovsky ordering its different aspects and its role in dynamical systems theory and applications It addresses the coexistence of cycles for continuous interval maps and one dimensional spaces combinatorial dynamics on the interval and multidimensional dynamical systems Also featured is a short chapter of personal remarks by O M Sharkovsky on the history of the Sharkovsky ordering the discovery of which almost 60 years ago led to the inception of combinatorial dynamics Now one of cornerstones of dynamics bifurcation theory and chaos theory the Sharkovsky ordering is an important tool for the investigation of dynamical processes in nature Assuming only a basic mathematical background the book will appeal to students researchers

and anyone who is interested in the subject **Annales Mathematicae Silesianae** ,1999 **Dynamics with Chaos and Fractals** Marat Akhmet,Mehmet Onur Fen,Ejaily Milad Alejaily,2020-01-01 The book is concerned with the concepts of chaos and fractals which are within the scopes of dynamical systems geometry measure theory topology and numerical analysis during the last several decades It is revealed that a special kind of Poisson stable point which we call an unpredictable point gives rise to the existence of chaos in the quasi minimal set This is the first time in the literature that the description of chaos is initiated from a single motion Chaos is now placed on the line of oscillations and therefore it is a subject of study in the framework of the theories of dynamical systems and differential equations as in this book The techniques introduced in the book make it possible to develop continuous and discrete dynamics which admit fractals as points of trajectories as well as orbits themselves To provide strong arguments for the genericity of chaos in the real and abstract universe the concept of abstract similarity is suggested **Handbook of Dynamical Systems** B. Hasselblatt,A. Katok,2002-08-20 Volumes 1A and 1B These volumes give a comprehensive survey of dynamics written by specialists in the various subfields of dynamical systems The presentation attains coherence through a major introductory survey by the editors that organizes the entire subject and by ample cross references between individual surveys The volumes are a valuable resource for dynamicists seeking to acquaint themselves with other specialties in the field and to mathematicians active in other branches of mathematics who wish to learn about contemporary ideas and results dynamics Assuming only general mathematical knowledge the surveys lead the reader towards the current state of research in dynamics Volume 1B will appear 2005

Iteration Theory (ECIT '04) ,2006 **Iteration Theory (ECIT '06)** Gian Luigi Forti,2007 Dynamic Bifurcations Eric Benoit,1991 Dynamical Bifurcation Theory is concerned with the phenomena that occur in one parameter families of dynamical systems usually ordinary differential equations when the parameter is a slowly varying function of time During the last decade these phenomena were observed and studied by many mathematicians both pure and applied from eastern and western countries using classical and nonstandard analysis It is the purpose of this book to give an account of these developments The first paper by C Lobry is an introduction the reader will find here an explanation of the problems and some easy examples this paper also explains the role of each of the other paper within the volume and their relationship to one another CONTENTS C Lobry Dynamic Bifurcations T Erneux E L Reiss L J Holden M Georgiou Slow Passage through Bifurcation and Limit Points Asymptotic Theory and Applications M Canalis Durand Formal Expansion of van der Pol Equation Canard Solutions are Gevrey V Gautheron E Isambert Finitely Differentiable Ducks and Finite Expansions G Wallet Overstability in Arbitrary Dimension F Diener M Diener Maximal Delay A Fruchard Existence of Bifurcation Delay the Discrete Case C Baesens Noise Effect on Dynamic Bifurcations the Case of a Period doubling Cascade E Benoit Linear Dynamic Bifurcation with Noise A Delcroix A Tool for the Local Study of Slow fast Vector Fields the Zoom S N Samborski Rivers from the Point ofView of the Qualitative Theory F Blais Asymptotic Expansions of Rivers I P van den Berg Macroscopic
